- Product Weight: 58 Lbs.

The Universal Guardrail Base by Tie Down Safety is the lightest guardrail base in the United States at 58 lbs. These base plates nest and stack easily with one another. The toe board slots, and handle holes allow easier lifting, reducing the risk of soft tissue injuries on the job site! The Universal Guardrail Base represents the ultimate free-standing fall protection system. The base plate requires no penetration of the roof substrate and provides extreme durability due to the TS22 coating. The installation time is reduced by over 30% because one person can comfortably carry. Tie Down Safety maintains high standards and quality control through quality raw materials and components made in the USA.
